- Auto search for devices in Ethernet network
- Remote configuration of connected CCTV devices
- Import / Export of program settings
- Support for GenSTAR series LPR cameras
- Support for thermal imaging cameras from the GenSTAR series
- Keyboard shortcut support
- Time synchronization in connected devices
- Downloading the status of connected devices

## Name GENSTAR VMS

Number of monitors supported	Max 4 pieces (floating windows)
Number of supported devices	Max 256 recorders
Number of simultaneous connections (video)	Max 64 (customer)
Playback	Max 16 channels
Playback speed	Max. x32 (forward / reverse)
Number of supported channels	Max. 4096 (server)
Number of customers served	Max 256 (server)
Events	Alarm input, Motion detection, VA, Video loss
Shares	POP-UP, Audio notification, Alarm output

Workstation hardware configuration: We recommend using Intel processors and graphics cards based on Nvidia components.

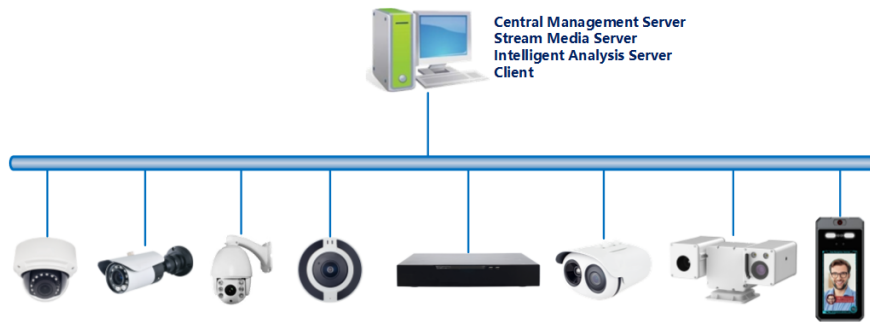

## Hardware requirements (recommended):

CPU Processor	Intel Core i5 (7th gen)
RAM	8GB
Graphics card	Min. 2GB of dedicated memory
HDD	2 GB
Operating system	Windows 7 or later
Monitor (resolution)	Min. 1366x768

## Example hardware configurations:

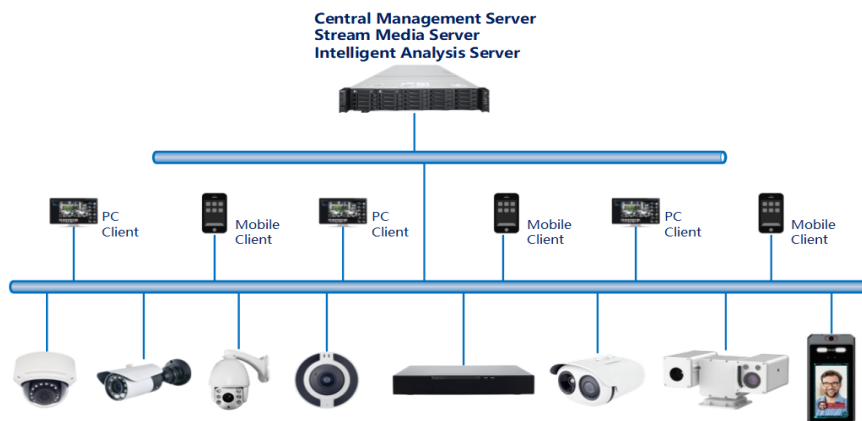

Option:	Parameters:	Equipment:
I	Number of supported cameras: 64 Summary display: 64 cameras - 720p Total input bandwidth: 384 Mbps	Intel(R) Core(TM) i7-7700 @ 3.6GHz RAM - 16GB Nvidia GeForce GTX 1050 Ti 4GB
II	Number of supported cameras: 64 Display per monitor: 32 cameras - 640*360 Total input bandwidth: 256 Mbps	Intel(R) Core(TM) i5-7500 @ 3.4GHz RAM - 6GB Nvidia GeForce GTX 750 2GB

# GenSTAR VMS - client software for operating Ganz GenSTAR series DVRs and cameras

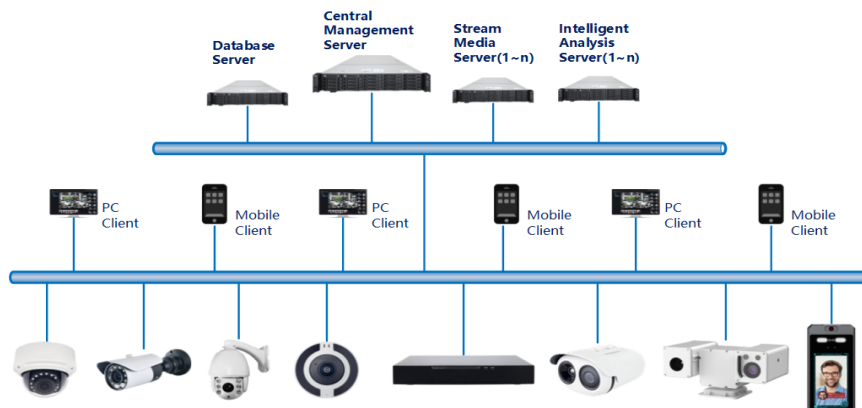

## SMALL INSTALLATION

For installations in small systems where a client application and a server application are installed on each client computer.

## MEDIUM INSTALLATION

For installations in medium-sized systems where a server application is installed on one unit and a client application is installed on each client computer.

## LARGE-SCALE INSTALLATION

For installations in wide-area systems where each of the server application modules is installed on a separate unit and the wideoe streaming server is duplicated and the client application on each client computer.
